

## WHAT IS ENTO COMPOST:

Ento Compost is the Black Soldier fly larvae frass which includes larvae waste exoskeleton sheddings and remaining decomposed feed ingredients which is rich in organic matter and nutrients which makes soil fertile and best suited for organic farming.

## ADVANTAGES:

Ento Compost is a valuable soil amendment having all major and micro nutrients required for plants, and an excellent soil conditioner. Improves soil physical, chemical and biological properties of soil, creating a suitable environment for better rooting, plant growth and higher yields. It enhances pest and disease resistance, thereby reducing stress on plants. Reduces the use of chemical fertilizers.

## WHAT IT DOES:

Ento Compost is rich in all essential plant nutrients. A major by-product of black soldier fly, which has a great potential as a fertilizer in organic farming. It is safer for the consumer, more effective, environmentally sustainable, and cost effective. It contains all major and micro nutrients that promote healthy growth of plants. It is produced by break down of organic material with aid of black soldier fly larvae to improve the quality of soil.

# ENTO COMPOST

ZERO WASTE

SUSTAINABLE

ODOUR-FREE

# NUTRIENTS

Nitrogen (%)	1.0 - 1.5
Phosphorous (%)	0.5-1.0
Potassium (%O	0.5-1.0
Organic carbon (%)	20
CN ratio	19:4
Moisture (%)	15-20
Magnesium (%)	2-3
Calcium (%)	3-5
Sulphur (%)	0.5-1.0
Manganese (ppm)	40-50
Copper (ppm)	3-5
Zinc (ppm)	8-10
Heavy metals:	(Not detectable)
Cadmium	ND
Chromium	ND
Lead	ND
Nickel	ND
Colour	Black
Odour	No
Pathogens	Nil

Black soldier fly larvae feeds on anything biodegradable, they will minimise your municipal waste by over 70%.

It's a good product for promoting organic farming (Agriculture, Horticulture, and terrace gardening). It revitalises your soil, and assuring a good growth and better yields.

BSF compost as an organic fertilizer or its integration with NPK fertilizer boosts the growth, yield and nutritional of your farm yield, and nutritional quality.

## RECOMMENDATIONS:

A high quality soil amendment suited best for Agricultural and Horticultural crops.

**FRUIT TREES:** 4-5 kg/ tree (Twice a year).

**VEGETABLES & FLOWER CROPS:** 3.5 - 4 ton per acre, Add as a basal dose.

**FIELD CROPS:** 2.5 - 3 ton per acre, Add as a basal dose.

**POT MIXTURE:** 50 kg of Ento compost to 1 ton of pot mixture.

**NOTE:** Ento-Compost is not meant as a replacement for fertilizers.

Disclaimer: Intended for Agriculture and Horticulture use. Results depend on the climatic conditions as well as quality of the plant. There are no warranties of performance expressed or implied. Manufacturer has no control on user's storage, handling or product application condition. EntoProteins shall not be liable for damages arising from the presence or any kind of usage of the product.
